

# HOW TO CHANGE AN ID OF A DISTANT DECODER WITH DECODER SETTINGS SOFTWARE

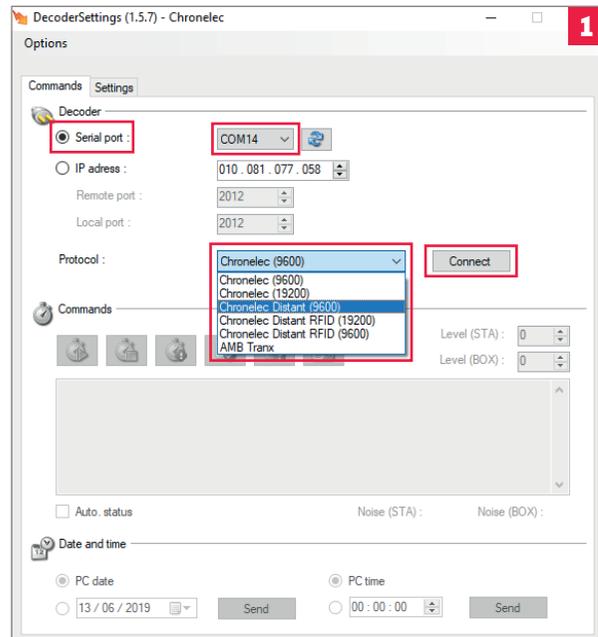

## IMPORTANT

Connect the PC and the decoder using a RS232 or USB/RS232 cable.

## STEP 1 : DOWNLOAD DECODER SETTINGS SOFTWARE

A distant decoder's ID can be changed with DECODER SETTINGS software available for download on our website : [www.itschrono.com / Downloads](http://www.itschrono.com / Downloads)

[DOWNLOAD DECODER SETTINGS](#)

1

## STEP 2 : CONNECT THE DECODER

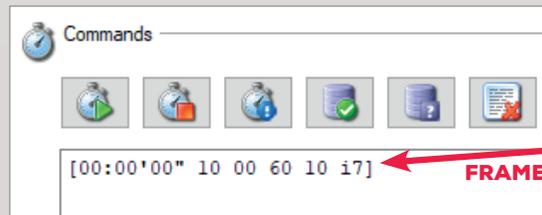

### 1 OPEN DECODER SETTINGS SOFTWARE.

- Select the **SERIAL PORT** connection and the **COM PORT** corresponding to your link between PC and **DECODER** : here **COM14**.
- To communicate with a distant decoder, you have to select the protocol **CHRONELEC DISTANT (9600)**.
- Then, click on **CONNECT**.

*The frame that appears attests the good connection between the PC and the decoder.*

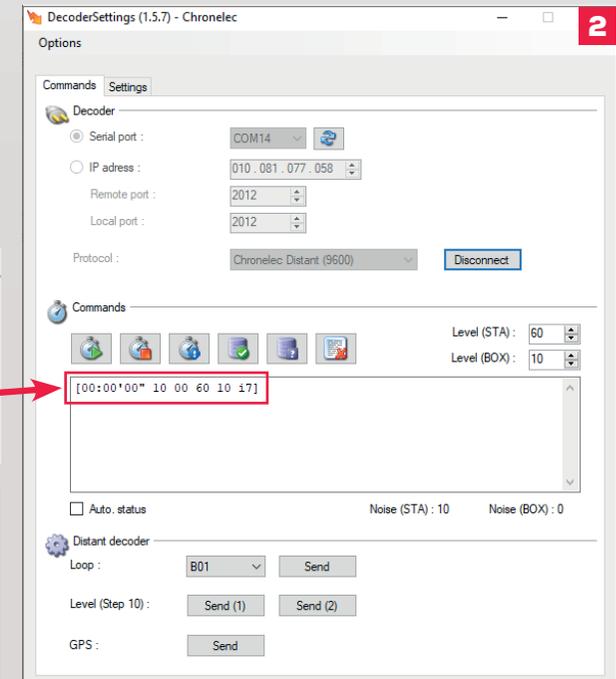

### 2 THE FRAME BREAKS UP INTO SEVERAL BLOCKS OF INFORMATION :

- **Time of the session**  
(here **00 : 00'00"** because decoder is stopped)
- **The level of noise**  
(here **10** on the loop 1 and **00** on the loop 2)
- **The level of detection of the decoder**  
(here **60** on the loop 1 and **10** on the loop 2)
- **ID of the decoder**  
(here **i7**).

## INFORMATION

*For distant decoder with 2 inputs loops :  
the second input takes automatically  
ID of the first input +1  
(so, here the second input is i8)*

## IMPORTANT

Connect the PC and the decoder using a RS232 or USB/RS232 cable.

## STEP 3 : CHANGE THE ID OF THE DISTANT DECODER

### 3 TO CHANGE THE ID :

- Select the desired new ID with the dropdown list.
- Click on **SEND**.

*Then, a frame appears with the selected ID.*

- To be sure that it's OK, you can click on **STATUS** to receive a new frame with the new ID at the end of this frame.

### 4 AFTER SUCCESSFULLY CHANGING THE ID OF THE DECODER :

You have to disconnect of the distant decoder with the **DISCONNECT** button before closing the **DECODER SETTINGS** software.
