

RF TRANSPONDER

HOW TO INSTALL IT ON MOTOCROSS

RF TRANSPONDER
AND ITS SUPPORT

- The transponder must be placed in the same place on all the motorcycles.
- The transponder must be as perpendicular to the track as possible because it is directional.
- The transponder must have a direct view of the runway (no metal or carbon) to ensure proper operation.
- The transponder should be at the opposite of the CDI box (*Capacitive Discharge Ignition*) if it is on the right or left side.
